Virtualization Design Review

REVIEW & PLAN FOR THE NEXT STAGE OF GROWTH

As virtualization technologies evolve and improve, it is important to take stock of your virtualized environment to ensure that it continues to provide a level of capabilities and functionalities to support the growing needs of your organization.

Focusing on industry leading platforms such as VMware vSphere®, IVT's Design Review Workshop provides an opportunity for your IT team to engage our senior consultants in reviewing and understanding the latest technological features, reference architectures and identify potential gaps in your existing environment.

The key deliverable is an assessment report that outlines improvements required in vSphere® configuration, virtual machine resource allocation, provisioning, availability considerations, virtual environment security and others.

We recommend that a complete Virtualization Health Check Service be run in conjunction with this design review workshop.
